Going to the theatres is fast becoming out of fashion. Thanks to the advantages offered by latest technologies like DVD and satellite, folks are turning more and more to watching movies at home. Home theatres are fast gaining popularity as a good set offers one great advantage. You can watch your old favorite movies which are still on VHS tapes, something which you really enjoy.

Moreover, the sound is a lot better with "surround sound" technology and so are the latest DVD players, which offer nice quality and can copy over VCR. The video display unit, however, plays a significant role in making or spoiling your entire experience. For most of us, the display unit is just a regular television, which produces sub-acceptable to fairly good images depending on the make and model of the unit, which ultimately results in people going for High Definition.

Now let's analyze what to look for in a good home theatre setup- Quality sound, VCR to DVD players, and possibly a new T.V. set. We shall consider all these as if the money would be spent from our own pocket and that we shall be viewing movies as much as an average family in the U.S. does, which is roughly 20 hours per week.

The Logitech Z-640 6 Speaker Surround Sound System is being offered for a competent price of only \$69 U.S. Amazon.com price. Or if you are looking for decent performance, look at the Sony HT-DDW670 Home Theater in a Box System costing approximately \$179 U.S. Amazon.com price. Both of these will produce respectable sound without burning a hole in your pocket.

Coming down to the player unit, the Panasonic DMR-ES40VS VHS/DVD Recorder is a great deal, with its performance and efficiency, at an approximate Amazon.com pricing of \$210 U.S. It comes in two color sets- silver and black and perhaps the best feature of this unit is that it can convert old VHS tapes, which we all have around, to DVD readily.

And now, enter the arena of display units, with HDTV sets which are available in a broad range in pricing and styling from the flat to the curved and from the small to the gigantic 50 Samsung HL-R5067W 50" HD-Ready DLP TV, costing approximately \$1500 U.S. Amazon.com price, which is hard to turn down. But if you want your images projected across a wall, expect to shell out anywhere ranging from \$1100 U.S. to several thousand dollars, and for obvious reasons, they aren't all that popular yet.

So if you own a regular sized counsel that holds the T.V., the books and records, then you might probably be going to look for something in the 32" to 38" range, and these are readily available in the market, ranging in prices from seven or eight hundred all the way up to thousands. Choosing a fairly nice television, the SAMSUNG TX-R3080WH 30" Wide

SlimFit HDTV w/ Built-In HD Tuner, costing approximately eight to nine hundred, is worth mentioning with good picture quality, excellent reputation and all.
